Microsoft Office File Formats Introduction

<https://go.microsoft.com/fwlink/?linkid=837980>

Microsoft makes available information about protocols, binary file formats, and other specifications for a number of its most popular products, including various versions of Windows and Windows Server, Microsoft SQL Server, Microsoft Office, Microsoft Exchange Server, and Microsoft Office SharePoint Server. These technical specifications enable and encourage a vibrant development community, resulting in smarter, interoperable products.

Important notes about the documentation

- **Download all Open Specifications documents to the same directory to retain links.**

If you use the PDF versions of the Open Specifications documents, be sure to download all of the documents to the same directory. Hyperlinks between technical documents require the documents to be in the same directory to work. Note that if you download additional Open Specifications documents from Microsoft, they should also be stored in the same directory to enable linking.

- **"Copy Code" button may not work in Firefox.**

The "Copy Code" button that appears on code samples in an Open Specifications document may not copy code to the clipboard when the technical document is viewed using the Firefox Web browser. If this occurs, instead of using the button, select the code and copy it.
